What are ARC Charity Indices?

ARC Charity Indices are a set of four Sterling denominated indices compiled by ARC Research (ARC) to be used by charity trustees and their advisers in assessing the performance of a discretionary charity portfolio with a non-specialist mandate.

The ARC Charity Indices provide insight into the actual returns being generated by discretionary charity portfolios, net of fees, based on hundreds of Sterling denominated charity portfolios submitted by participating investment managers (see Data Contributors listed on pages 10–11 of this report).

There are no pre-set asset allocations; no asset class restrictions; no concentration limits; and no index performances used. Only actual charity portfolio performance numbers are included in the calculation of the ARC Charity Indices.

Why Use ARC Charity Indices?

In recent years, it has become the norm for investment managers to adopt a multi-asset class approach to charity discretionary portfolio construction. This trend has meant that the traditional approach to benchmarking has become less useful and many charities have moved towards absolute rather than relative return measures.

The shift towards cash-plus or inflation-plus benchmarking has, however, left charity trustees and their advisers in a quandary. Given the volatility of financial markets, how can the evolution of manager performance over time be assessed? The four ARC Charity Indices are designed to solve this performance measurement conundrum.

The ARC Charity Indices series allow charity portfolio performance to be compared versus a realistic and sizable peer group of charities whose portfolios have exhibited similar volatility characteristics. Reflecting the opportunity set afforded by today's sophisticated and ever changing financial market, ARC Charity Indices are a barometer for the performance of the charity investment management industry.

Four Indices

Each of the four ARC Charity Indices corresponds with one of four risk categories as set out in the table below. Risk, for these purposes, is measured as the volatility of monthly returns over time. It is recognised that charity portfolios are exposed to other types of risk—ie failure to meet income targets or failure to grow in real terms—but it is exposure to potential loss of capital that is used as the common classification system for the ARC Charity Indices.

Each underlying portfolio is placed in one of the four ARC Charity Indices risk categories based on that portfolio's return volatility relative to equity markets over the previous 36 months.

Thus, a portfolio invested 50% in equities and 50% in bonds would typically be in the Balanced Asset category.

Category	Risk Relative To UK Equity Markets	Tolerance Bands after Initial Allocation
ARC Sterling Cautious ACI	0–40%	0–50%
ARC Sterling Balanced Asset ACI	40–60%	30–70%
ARC Sterling Steady Growth ACI	60–80%	50–90%
ARC Sterling Equity Risk ACI	80–110%	70–120%

Calculation Basis

- Sterling denominated monthly index with start date of December 2003
- Each portfolio's index contribution is not weighted by size
- Data Contributor concentration limits avoid any single Data Contributor dominating the indices

For more information on the compilation methodology please see www.arccharityindices.com.

The Sharpe charts below show the three and five year risk-return characteristics for each of the four ARC Charity Indices, along with a representative sample of 500 underlying portfolios. Note the spread of returns for any given risk profile. This highlights the importance of selecting a discretionary manager with care and then monitoring the evolution of performance over time.
